Project proposal

Project title (draft):

Sciomics is active in early-phase development of novel diagnostics. Based on an immunobased platform we conduct screenings for protein biomarker candidates. Subsequently, the top marker candidates can be validated in a parallel manner necessitating only a very limited amount of resources and sample (e.g. 10 μ L plasma/serum). The parallel multiplex analysis enables the definition of most accurate biomarker signatures.

We are active in a differential diagnosis of pancreatic cancer as well as a prediction of recurrence in bladder cancer. However, we are also very interested in supporting consortia active in other tumour entities with our platform.

Short description of the project in preparation and of the consortium; description of the areas of expertise needed (Max. 2000 words):
